Finding Articles in the Catalog

1. To find articles using the library catalog, begin at [www.marymountcalifornia.edu/library](http://www.marymountcalifornia.edu/library). On the library catalog search box, make sure to select the Articles tab before you begin your search. When you select the Articles tab, you will also have the option to search for articles in a specific journal, magazine, or newspaper.

2. On the left side of your search results page, you have options to filter your results by database, article format, author, year of publication, etc. to narrow down your results.
3. All Marymount-owned articles relating to your search term(s) will show up first in your results. The article icon indicates it is an article. The record also indicates if Marymount Library has access to it. Clicking on “View Now” shows all available links that will direct you to the full text of the article.

4. If you are working off-campus, you will need to log in to access articles. If it is your first time logging in, use your First Initial + Last Name as your username and your Student ID Number as your password.
5. Once you log in, you will be redirected to the article page in the specified database, which is usually EBSCO or ProQuest. You can view more information about the article, email the article to yourself, or cite the article. NOTE: some articles may have only HTML Full Text, only PDF Full Text, or both.

6. If you have any questions or problems about finding articles in the catalog, ask a Marymount Librarian!
